WEB DEVELOPMENT ASSIGNMENT : 16

Responsive Design Assignment Questions with Hint

---

1. Create a fully responsive webpage layout

Create a webpage that adjusts layout based on screen size like desktop, tablet and mobile. Layout should include header, content and footer.
Hint: Use media queries and percentage or flexible units instead of fixed pixels.

---

2. Create responsive navigation menu

Create navigation menu that shows horizontal menu on desktop and vertical stacked menu on mobile screen.
Hint: Use media queries and change flex direction or display property.

---

3. Create responsive two column layout

Create layout that shows two columns on desktop and single column on mobile.
Hint: Use media queries to change width or grid column structure.

---

4. Implement mobile first responsive design

Create webpage where default CSS is for mobile and then add styles for larger screens.
Hint: Write base CSS first and use min width media queries.

---

5. Create responsive image gallery

Create image gallery where number of images per row changes based on screen size.
Hint: Use flex wrap or grid auto fit and media queries.

---

6. Create responsive typography layout

Create layout where text size changes based on screen size for better readability.
Hint: Use rem or vw units and media queries.

---

7. Create responsive form layout

Create form that displays fields in row on desktop and stacked vertically on mobile.
Hint: Use flex or grid and media queries.

---

8. Create responsive card layout

Create card section where number of cards per row changes based on device width.
Hint: Use grid minmax or flex basis.

---

9. Implement responsive images using CSS

Create images that resize automatically based on container width.
Hint: Use max width 100 percent and height auto.

---

10. Implement picture element for responsive images

Use picture tag to load different images for mobile, tablet and desktop.
Hint: Use source tag with media attribute.

---

11. Create responsive sidebar layout

Create layout where sidebar shows on desktop but hides or moves top on mobile.
Hint: Use media queries to change position or display.

---

12. Create responsive dashboard layout

Create dashboard layout that rearranges components based on screen size.
Hint: Use grid template areas and media queries.

---

13. Create responsive table layout

Create table that becomes scrollable or converts to card layout on mobile.
Hint: Use overflow auto or display block techniques.

---

14. Create responsive video container

Create video section that maintains aspect ratio on all devices.
Hint: Use aspect ratio or padding trick method.

---

15. Create responsive footer layout

Create footer that shows multi column layout on desktop and single column layout on mobile.
Hint: Use flex or grid and media queries.
