WEB DEVELOPMENT ASSIGNMENT : 19

Bootstrap Grid System Core Assignment Questions with Hint

---

1. Create layout using different Bootstrap containers

Create webpage showing container, container fluid and responsive container usage and observe layout width change.
Hint: Use different container classes and test in different screen sizes.

---

2. Create basic row and column layout using Bootstrap Grid

Create layout using one row and three columns and place content inside each column.
Hint: Use row and col classes inside container.

---

3. Create equal width responsive columns layout

Create layout where columns automatically adjust width equally in row.
Hint: Use col class without number for equal width.

---

4. Create fixed column size layout

Create layout where first column takes half width and remaining two share other half.
Hint: Use col 6 and col 3 column combination.

---

5. Create responsive layout using breakpoints

Create layout that shows four columns on large screen, two columns on tablet and one column on mobile.
Hint: Use col lg, col md and col sm classes.

---

6. Create responsive product card grid using Bootstrap Grid

Create product cards layout using Bootstrap grid which changes column count based on screen size.
Hint: Combine grid classes with card component.

---

7. Create nested grid layout using Bootstrap

Create grid inside another column to create complex layout.
Hint: Create row inside column and add columns again.

8. Create responsive sidebar layout using Bootstrap Grid

Create layout where sidebar and content display side by side on desktop and stack on mobile.
Hint: Use different column sizes for different breakpoints.

9. Create layout using offset classes

Create layout where column is shifted from left side using offset classes.
Hint: Use offset classes with column classes.

10. Create column ordering layout using Bootstrap

Create layout where column order changes based on screen size.
Hint: Use order classes.

11. Create auto layout columns using Bootstrap

Create layout where column width automatically adjusts based on content.
Hint: Use auto column classes.

12. Create full width responsive layout using container fluid and grid

Create full width section using container fluid and place grid layout inside it.
Hint: Combine container fluid with row and columns.

13. Create responsive dashboard layout using Bootstrap Grid

Create dashboard layout with header, sidebar, content and footer using grid system.
Hint: Combine multiple rows and columns.

14. Create responsive image gallery using Bootstrap Grid

Create image gallery where number of images per row changes based on device size.
Hint: Use grid breakpoints and img fluid.

15. Compare responsive layout using Bootstrap Grid and CSS Grid

Create same layout using Bootstrap Grid and CSS Grid and compare output.
Hint: Focus on class based layout vs custom CSS layout.
